

HUNATE

HUMANITY NATURE TECHNOLOGY

The Hunate Culture Design Book

A Regenerative Life Design System

THE HUNATE MOVEMENT

Damak, Nepal

Hunate Culture is the design system that transforms the HUNATE philosophy into real, everyday living. It blends ancient knowledge (Vedic astrology, Vastu Shastris, ayurveda, yoga sutra), modern approaches (eco architect, permaculture, and ethical technology, renewable resources, computer science, mechanical science etc) and resource based ethical business modules to create personalized lifestyles that honor both ancient truths and modern needs, across time (past, present, future) and life stages (child, adult, elderly). It's a life design system based on findings from HUNATE.

Based on the findings of the Hunate Project, this is a principle of the design system of human lifestyle, houses, farm, business, social structure and future which will insure balance and harmony among humans nature and technology.

Culture of the future rooted in the past. When the past and future unite. Nature based Lifestyle with modern approach.

Mission:

To help everyone understand the elements that affect human life, nature and future and help design holistic living systems/lifestyle, homes, farms, business, etc for individuals, family, community. Also help design social systems, city, country, school, orphanages, government, economy and businesses, and whoever needs using nature based principles, local resources, natural elements and ethical innovation, technologies and findings from HUNATE project.

To restore the health of Mother Earth (land, air, water, food, animals, plants, etc) as well as the health of smarter and stronger humans.

To use technologies wisely and ethically to serve life, not destroy it. To preserve earth, nature for future generations. To unite families and help them find common goals and business to work on.

Vision:

A world where when a child is born, he/she will have excess fresh air, fresh land, fresh water, fresh food as a gift, for free. A world where education is given to him/her which is important for them, like knowledge of who they are, and what they are made of and where we all as humans are going. Knowledge like what earth is, where we live and who else lives there, like animals, plants, etc, what our bonds are and how to understand them, interact with them, treat them, connect with them, protect them, etc. a world where those new humans can be taught to be better everyday. A world where everyone works and lives for a better, healthier future. Evolving self, nature and everything to higher capable and healthier beings.

A healthy human, healthy earth. Designed in a way to share resources based on the needs of every animal, plant, and humans.

Houses, town, city, etc designed in natural law and local resources with proper waste management and land distributions.

Lifestyle designed in a way to challenge humans to grow, train, exercise, every part of being, mind, body, soul, intellect, strength, logic, creativity, etc. lifestyle, work, routines, designed to change and evolve humans into higher, healthier, smarter beings.

Foods produced in every land piece and house, so the whole earth will be food abundant and free to eat for everyone.

Parents such as educated and trained and well experienced, healthy, wealthy, smart, capable of giving birth to new children and raising them efficiently, knowing what to teach, feed, etc.

School system, education system embodied in society and lifestyle itself, rather than in closed class rooms. Education starts from birth, from parents, society, relatives and then from world travel and expiration.

Technologies and development produce no waste which is harmful to humans, nature and earth and future.

A world living in balance and harmony with self, nature and technology. Humans living in peace and living to make this place earth better for next generations.

A culture of intentional, regenerative living that respects tradition while building for a better, modern and healthier future, all for humans, nature and technology.

Goal:

To support individuals, families, education system, orphanages, politics, agriculture industries, government system, medical industries, etc in creating sustainable, regenerative, self sufficient lifestyles by offering consultation, guidance, tools, training, resources and design models grounded in balance, harmony and evolution.

To make Nepal our first Human Culture Hub to learn from for the world. And again spread to the world.

THE HUNATE CULTURE DESIGN BOOK

Design Principles (Hunateculture Foundation)

Definition, We design human environments and systems by putting natural laws, human health, and long term resilience at the centre. Ancient wisdom is our root; modern tools provide scale, precision, and accessibility.

Why it matters, Modern practice often optimises profit and speed over health and longevity. Ancient systems were built around ethics, discipline, local ecology, and long term stewardship. Combining both gives practical, scalable, regenerative design.

This modern social system is failing us to be better humans, protect nature, use technologies to better the future, and produce better humans. And we need to redesign every system. So, hunateculture aims to do so, starting from the individual and home environment, to the place where a new child comes to life.

When a child is born, we have to give them fresh land, air, water, food, and environment to start with. We have to raise them with love, care, good necessary knowledge to live on earth and work with technologies and society. And Hunateculture designs the home environment, community for such a palace for a child, family and community for a better world, healthier humans, clean and fresh earth.

So, when a child is raised in a Hunateculture designed environment, they will be healthy, storing, capable, individuals. They will fix the earth and everything naturally.

Core principles

Ecocentric first, prioritize ecosystem health before extractive gain.

Local & circular, use local materials, local skills, circular resource flows.

Human scale & dignity, designed to support human bodies, rhythms, and social life.

Timing & seasonality, align work and rest with natural cycles.

Iterate & measure, test small, measure outcomes, learn quickly.

Teach & decentralize, design to be learnable and replicable by local communities.

Practical tools

Design checklist (site, water, materials, social impact).

Minimum Viable Eco Build (MVEB) template for pilot housing.

Seasonal calendar for programming (planting, festivals, training, rest cycles).

Community feedback loop (monthly review + simple KPIs).

Suggested KPIs / Outputs

% local materials used on a project.

Energy consumption per person (kWh/month).

Local employment created (FTEs).

Waste reduction (% reused/composted).

Resident health & satisfaction surveys.

Core learning modules

Introduction to Hunateculture Design Principles.

Practical ethics + decision making.

Measurement & iterative design (simple M&E).

IN KHEM'S WORDS

As we keep saying, human life is affected by many elements from nature, we design based on these following elements.

We use ancient ways more as root because those sciences were developed in a time where everything was based on nature's health, human health, animal health, and future perseverance. Think for yourself, this era science and development are rooted in profit, greed, possession, selfishness, control, lie, corruption, misleading, confusion, propagandas, etc. back in times these ancient science and education system were written, it was deeply rooted in ethics, morals, devotion, disciplines, etc.

In most ancient books, you can see and feel for yourself. They were thinking of self improvement, self reliance, abundance, responsibilities towards, nature, earth, fellow species, and the future.

Also, in those times, it seems, they use to deeply investigate on one subject for an extended period of time, researching, debating, challenging other fellow companions to find answers to solutions, unlike now, you copy from others and publish it fast to keep earning money and taking care of family, at same time following world trend, time rhythm, dead line, etc.

And if you just try to understand them well and practice them in your life, you will feel the difference between modern science and ancient science, methods and ways. And we chose to believe

in ancient knowledge more.

Core Hunateculture Design System

We use ancient science and modern science to design a life. Knowledge forms both Eastern and Western worlds. We analyse past, history, myths, present and future into design. We consider the well being of humanity, nature, nature and future strictly.

Below are some of the important knowledge, wisdom, science we use for our design system.

Space Science (Vedic Astrology as Practical Timing & Life Design)

Definition, Treating astrological knowledge as a timing, personality, and life architecture tool, not fortune telling. It's used to map tendencies, biological rhythms, timing of projects, and compatible environments.

Why it matters, Subtle environmental/astral rhythms correlate with human behaviour, hormones, and ecosystem cycles. When used as a planning tool it reduces friction and increases wellbeing.

What we do (practical & ethical)

Use birth charts as relative maps of strengths/weaknesses and as a guide to seasonal planning (work, study, rest).

Translate charts into action plans (diet, sleep cycles, preferred tasks, places to live/work).

Use timing methods for project planning (planting, construction milestones, healing interventions).

Train practitioners to be holistic consultants: combine chart readings with psychology, Ayurveda, Vastu, and actionable lifestyle plans (no mysticism only advice).

How to apply

Intake form + birth data to temperament and energy profile to a year lifestyle plan (diet, practice, work rhythm).

Project start dates recommended with risk/benefit notes; contingency plans for unavoidable timings.

Outputs & metrics

Personal plan adherence score (self reported).

Wellbeing baseline and 3 month follow up.

Project milestone success rate when aligned to recommended timings.

Roles & training

Certified Hunate Astrologer: must have grounding in psychology, Ayurveda, and practical life coaching.

Training modules: Chart literacy to Translating to lifestyle to Ethics & consent to Project timing.

IN KHEM'S WORDS

Because space elements as we know, planets, sun moon everything affects life on earth. There is no doubt about it.

We understand that there is a misunderstanding about astrology because this modern time has connected it with religion. But we take it as science itself from ancient times. And we find many truths in these confusions.

Simple examples are when the sun comes, it starts getting brighter and we call it day. It brings temperature rise in shining places, affecting every plant, animals and humans. Plants start producing oxygen, food, etc. animals start moving creating a change effect on earth. Humans start working. Changing everything.

When the sun goes down, everything stops in some ways, resting starts. It starts becoming darker. Hormones, chemicals start changing inside the human body.

Its movement brings change in climate, temperature, pressure, oxygen level, magnetic flows, everything on earth. This is just one simple example of how space affects life on earth. Designs etc.

So the sun alone is creating so much change inside the human body, hormones, water and mass ratio, etc. Imagine what other planets, constellations and rays are doing to us.

Imagine what the moon is doing to us. And what other celestial bodies are doing to our body, mind, emotions, hormones, thinking patterns, etc. imagine what is happening with our house designs, city plans, etc.

We don't use it to predict the future as an unlearned astrologer but to use it in our designs for smooth understanding and function of life on earth.

We use it to look at our body constructs at time of birth. We use it to look into parents' lifestyle and effects of them on our body and life. We use it to know the chemical, hormonal spectrum inside our body, which will affect our mood, emotions, thinking abilities, physical strengths and combinations, which will again influence our choices, actions, etc in life.

Like how the sun and moon can trigger hormones inside us to wake up and sleep, we are triggered by other bodies too. Our way is to understand in our lifetime, which changes in constellations drive what hormones in ourselves. And knowing that will help us understand what type of work to do in what year, when to plan, when to work, when to rest, when to be healthy, when to be angry, when to be happy, which place to live in, what business to do. What elements and materials to keep close and what to stay away from.

Let's have a look at another example. In the mountains, there are different altitudes, there are different facing sides, and a micro climate within the same hill. And if every one plants millet at the same seasons and time, those millets from different fields give different harvests. Why? Because the sun they get, morning sun, evening sun, moisture they get, wind they get, nutrition they get, water they get, moon light they get, human intervention they get, everything matters and everything affects that same millet crop in that region. So they all come with a slightly different harvest, size, colour, even taste to human tongue. Even the way they are harvested, time, seasons, weeks, day and evening time of harvest, drying, processing, storing time, everything further makes difference to the human taste. To take it even further, forget about millet from the whole village, even in the same field, some grow tall, some short, some don't bear more millet, some grow more, because of slight change in environment. Have you seen colour mixing in water, or sand being blown in the desert? Those are the movements of wind and nature, those movements make a difference too, what portion of dense wind with more moisture hits which specific crop. Even insects that are travelling around crop to crop changes the outcome. This is how nature works.

So now, let's go macro level, in space. There are climates in space too. Three rays, vibrations, zones like in a mountain. There are lights travelling, rocks, travelling, stars forming and dying, there are environments. They affect each other's positions. We all are connected.

Have you heard of ray from space hitting computer components and changing vote results in the USA election once? Have you heard of space rays having ability to change human or any organism DNAs and changing evolution? Have you seen people getting darker in exposure to the sun? Have you ever seen an eclipse changing day into night in an instant? Have you seen meteorites falling to earth? The point is we are always interacting with each other, in ways we can see and also in ways we as humans can not perceive with our limited sense organs.

Ok like that millate in the same field, stars, planets, constellations, sun, moon does affect humans and nature on earth. The specific position of space objects influence the level of hormones, chemicals, construction, of our body as humans. Some are born strong willed, some are weak, some are healthy, some are not, some have strong hormones to be angry, furious, brave, daring, some come with peaceful, calming, smoothing, relaxed hormones. It's like that millet, slight change in placement, environment, time, position of space elements, movements, that created difference in our creation. Take it this way. And it is an ever going process, as you keep growing. The space objects keep changing, so do those effects on you. That is why you are lost some years, have purpose some years, feel happy some years, feel ease some years, because your hormonal and chemical elements are changing too because of celestial bodies.

Of course, these are not the only things affecting us, there are earth elements too affecting our construction, before we are

born and after too. It is an ever going, constant change and effect thing, the way of nature.

The problem now is that we ask wrong questions to astrologers. When will I get married? How much will I earn? How successful will I be? What was my past life? Who will be my lover? When will I die? Etc. we think, the questions we are supposed to be asking is, in the time of my life, when shall i work hard? When shall I rest? What is my body constructed for at birth? What are my strengths? What are not? What elements on earth are compatible to me, like trees, metals, food, lifestyle as per my body construct? Or how can I change my weakness, with exercise, meditation, food, lifestyle, etc?

Because as humans, we can counter effects from planets if we know how. We are that capable. We can train to balance our chemical and hormonal flow. We can change our weaknesses with knowledge and exercise. We can be prepared if something is happening.

So you also should look for those astrologers, who can look into your birth chart, find these elements and guide you well. If he sees weakness in your life, body or mind, he should be able to give you advice to counter it practically, not with some cheap tricks and shortcuts. That astrologer should be able to work as a life consultant, a holistic one, should be good looking, physically fit, mentally stable, sharp, kind, healthy, and wise. They should be able to give advice on lifestyle, food, books, knowledge, ayurveda, vasty, ecosystem, human psychology, social psychology, economics, business, politics, science, computer and technology, knowledge of nature, everything.

Vastu Shastra (Earth Element & Placement Science: Practical Site Intelligence)

Definition, Practical, site specific rules for placement, flow, and function of buildings and landscape, integrating microclimate, local ecology, and human use.

Why it matters, Proper placement of rooms, openings, water, and movement reduces energy waste, improves health, and increases social harmony.

What we do (practical practices)

Site reading: slope, aspect, wind lines, water table, soil test, vegetation.

Zoning: quiet zones, active zones, production zones, wet zones.

Microclimate design: orient buildings for passive heating/cooling, natural ventilation.

Functional mapping: rooms and furniture mapped by task & ergonomics (minimize travel, optimize sunlight).

Material & finish guidance: local, low toxicity, high thermal mass where appropriate.

How to apply

A standard Vastu Site Audit checklist for builders and community planners.

Design templates for home, school, and farm (1 page quick guides).

Retrofit recommendations, low cost, high impact changes (planting, shading, door swaps, ventilations).

Outputs & metrics

Reduction in heating/cooling loads (%) after retrofit.

Time saved per day (avg movement reduction).

Resident comfort & conflict reduction indicators.

Roles & training

Hunate Vastu Practitioner (site auditing + retrofit design).

Training modules: Site reading to Passive building techniques to Retrofit interventions.

IN KHEM'S WORDS

Like space, but rather than celestial bodies, elements on earth work in slightly different manner.

Air, water, fire, land, space, has a law and a system to function. And we use it to build houses, farms, and city plans. Etc

This science was used in ancient times to build houses, castles, temples, cities, war zones, gardens, everything. And the most important thing is they study space elements, sun, moon, stars etc before constructing anything. They used to study local land, nature, animals, resources, local elements, etc before constructing anything. They use it to make sure they are not harming anything, not humans, not animals, not plants, not nature. And we find value in it. They used to build to last, designs rooted in nature.

We use it to make natural flow of energy smooth in our surroundings and environment. Every object, element on earth has its mass, function, and occupies every portion of space. They radiate some energy, radiation, magnetic fields, that affect human life, not just human life, every object is interacting with each other constantly.

Our method is to understand those elements and energies they hold and use it for the benefit of home, human life, nature,

and future.

A simple example will be, like we divide rooms in our house for specific uses: toilets, sitting room, bed room, store room, garage, etc. every room has its function, properties, smell, size, positions. If we move more to smaller objects, like furniture, gas stove, car, etc, they all belong to specific rooms. Even doors, windows, ventilations, walking paths, garden, stones, etc all have a place to be.

If we arrange them well, we will save energy, work flow, walking distance, work efficiency, social psychology, happiness, concentration on work, etc. so every object has a crucial role to happiness, success, efficiency, etc in life. It can break or unite family, community, and the whole world.

Nowadays, people use remedies such as vastu shastra. We don't go and work on roots, we try to hide problems on the surface. Actually this mind set can be seen everywhere, cosmetics, office, medical industry, news, schools, etc. see, earth energy, rays, vibrations, magnetic effects, can not be covered by just one colour, one object, one pot or one picture. Yes if you go micro, one every individual object radiates energy of their own, but what is it in the effect of thousands of other objects around our environment.

Go to the roof top of your house and see around 360, what will you see? Yes, everything that you see is radiating its energy and affecting your place, you and house and all. We all are interacting. Not just that, please, those things we don't see, air, magnetic energy, rays, vibrations, slight drop in temperature, slight change in atmospheric pressure, slight change in climate, they all are affecting each other.

Vastu shastra is this knowledge. Knowledge of land, air, water, fire, space. Knowledge of prakriti, properties of elements, characters of elements, directions, earth position on space, earth elements, constructs, flow of those elements and energies. Knowledge of seasons. Knowledge of living and non living.

Earth is our home, so why is this knowledge not shared in school, why is it not taught in school? I wonder. This is an example of a failing system. This earth is our home, why are we not taught to learn about our home from childhood? Imagine, you know nothing at your home. What will you do? Where will you go to eat? Where will I go to take a bath? Where will you go to sleep? Who will you ask? Who do you depend on? The same thing is happening in this world. We have created an education system and social system to keep ourselves in darkness and some one who knows this knowledge is manipulating us. Control us, ordering us to go where they want us to go.

So, know this knowledge of earth. Guide your own paths to rooms you want to visit with this knowledge, or we are here to help you create a place which you will know more of.

Yoga Sūtra (Human Body Science: Practice, Training & Ethics)

Definition, Practical training system for body, breath, attention, and social conduct, used to increase strength, focus, resilience, and ethical capacity.

Why it matters, A trained body mind increases clarity, discipline, and ability to live in complex communities without destructive impulses.

What we do

Teach progressive practices: breathwork (pranayama), posture & movement (asanā), attention training (dharana/dhyāna), and ethical precepts (yama/niyama).

Integrate with daily schedules: morning practise, midday resets, evening recovery aligned to seasonal rhythms.

Use tests & progress markers: functional strength, flexibility, breath control, attention duration.

How to apply

3 tier curriculum: Beginner (daily habits + functional movement), Intermediate (deeper breath and meditation), Advanced (teaching & therapy applications).

Short micro practices for farm workers, builders, students (5, 15 minutes pockets).

Group sessions integrated into community life: communal practice before work cycles, rest periods after heavy labor.

Outputs & metrics

Attendance & adherence.

Functional improvement tests (e.g., breath hold, mobility markers).

Self reported stress & sleep quality.

Roles & training

Hunate Yoga Facilitator: practical teacher, trauma aware, community minded.

Training modules: Safety & anatomy to Progressive teaching to Community application.

IN KHEM'S WORDS

We use this knowledge and science to understand ourselves. What makes us humans? How to use this body mind to its fullest. How to train them. How to enhance them in natural ways.

In ancient times they used this science to understand themselves. Find meaning of life, find uses of body, strength, flexibilities and limitations. They used to understand mind, intellect, sense organs, etc. they used it to understand work, karma, responsibilities, and places on earth, society and family. They used it to understand soul, devotion, surrender, discipline, sacrifice, etc. they used it to understand bond with nature. They used it to build ethics, code of life, values, morals, duties, etc.

What is happening in this world? Why are we not teaching humans, your child about them at first? What and how did this system come about? When did it change from ancient times? Why are these not taught at school? We have gone too far from the line of stupidity. How do we expect to be a healthy, prosperous, capable human if we don't know who we are and what we are made of and what we are capable of?

Our way is to share knowledge of space, earth, food, human body, science, math, computers and technologies, etc to be capable humans. It is important to teach every new human this knowledges.

Ayurveda (Diet, Seasonality & Design of Living)

Definition, A living medical and life design system relating body constitution (prakriti), food, climate, and daily rhythms to health and performance.

Why it matters, Food, lifestyle, and environment are the first medicines. Ayurvedic thinking helps match the person to place and season.

What we do

Use constitution assessment to design diet, daily routines, and environment recommendations.

Integrate with farm design (what to grow), kitchen layout, and product recommendations.

Seasonal protocols for prevention and resilience (cleansing cycles, supporting foods).

How to apply

Personal assessment baseline to 3 month dietary & lifestyle plan.

Farm/kitchen plan aligned to community dietary needs and seasonal food preservation methods.

Training for cooks and health workers on basic Ayurvedic first aid and preventive food science.

Outputs & metrics

Reduction of common seasonal illnesses.

Food wastage reduction through preservation techniques.

Improved nutritional outcomes (BMI, self reported energy).

Roles & training

Hunate Ayurveda Practitioner: combines practical nutrition, herbal first aid, and farm food planning.

Modules: Dosha literacy to Food as medicine to Community kitchen systems.

IN KHEM'S WORDS

We use it to understand nature and its bond with us, human life and body. Combining with yoga, vasty and ayurveda, we also design our farm, home life to its maximum harmony.

In ancient times, this was a medical science and it was rooted in nature's elements, food and healing of both humans and nature together. They used to see medicine in everything nature has to provide.

We use it to first understand our body construct and understand what to eat to maintain good health. We use it to understand how to live, where to live, what world, skills to acquire in life. We use it to understand seasons, changes and how to prepare and adapt into changes.

Permaculture (Regenerative Farm, Food & Life Design)

Definition, Design system that creates productive, resilient food and habitat systems by mimicking natural ecosystems.

Why it matters, Lowers inputs, closes resource loops, increases biodiversity, and provides steady yields with less external dependency.

What we do

Zoning, guild design, water harvesting, soil building, agroforestry, animal integration, post harvest handling.

Design entire homesteads for multi function, food, fuel, materials, habitat, learning.

How to apply

Rapid site permaculture design (one day audit to priority map).

Pilot swales & polyculture garden to scale by demonstration and training.

Integrated enterprise plan: what to grow, how to process (drying, cold storage), and market options.

Outputs & metrics

Soil organic matter improvement.

Yield per m² and caloric diversity.

Water retention & reduced erosion indicators.

Roles & training

Hunate Permaculture Designer (site planning, farmer training).

Modules: Soil science to Water & landscape shaping to Polyculture & production.

IN KHEM'S WORDS

It is an interesting science. We understand this as a science and art to connect every element of nature and life and use them in a way that they produce less waste as a byproduct.

We use it throughout our whole design. Connecting space, humans, nature, plants, animals, food, technologies, future, past present to design a holistic life style.

Eco Architecture (Natural Modern Building Science)

Definition, Building homes and public spaces that use local, natural materials, bioclimatic design, and modern engineering where required, minimizing carbon and maximizing health.

Why it matters, Houses are long lived infrastructure; building them right is high leverage for health & the climate.

What we do

Material strategy: prioritize earth, bamboo, sustainably harvested timber, recycled materials.

Passive design: orientation, thermal mass, shading, natural ventilation.

Hybrid engineering: where safety demands (seismic, span), integrate discreet modern materials (steel, reinforced concrete) with natural finishes.

Community build programs: train locals to build and maintain.

How to apply

3 tier templates: Temporary Shelter (rapid, low cost), Family Home (moderate budget), Community Hub (durable).

Construction manual: step by step common wall types, roofing, foundation approaches for local soils.

Maintenance protocols and lifecycle budgeting.

Outputs & metrics

Embodied carbon estimate per building.

Comfort (temperature range) & indoor air quality tests.

Local jobs trained & certified.

Roles & training

Eco architect, site builder trainer, materials manager.

Modules: Material sourcing to Passive systems to Build & maintain.

IN KHEM'S WORDS

We have lost an art to build an image of nature using natural elements.

We aim to restructure how we design and build houses. We use natural and local elements to design homes, cities etc.

Combining the effects of space, earth elements, farm, lifestyle, we design our houses in the image of nature, minimizing carbon foot prints.

Computer Science (Web, Hardware, Software), Ethical Digital Ecology

Definition, Use computing as a tool to connect, teach, document, and scale regenerative systems while minimizing harm (data extractive models, addiction design).

Why it matters, Technology multiplies impact, for good or ill. Use it to preserve knowledge, connect communities, and enable livelihoods.

What we do

Digital literacy & digital sovereignty: teach basics and provide tools people control (offline first apps, local servers).

Build ethical platforms for marketplace, knowledge bases, e learning. Use automation sensibly: assistive tools for farmers (irrigation scheduling), inventory, bookkeeping.

E waste and repair: create hardware repair hubs and refurbishing workflows.

How to apply

Digital stack: lightweight websites, community intranet (file sharing, calendars), simple CRM for projects, bookkeeping

templates.

Data ethics policy: consent, minimal data, local control.

Training: practical courses (office tools, web dev, content creation, data entry, AI for good basics).

Outputs & metrics

Number of people digitally literate.

% devices repaired & reused vs. discarded.

Traffic & contributions to open community knowledge base.

Roles & training

Digital Steward, IT Trainer, Data Ethics Officer.

Modules: Digital basics to Safe internet practices to Building community platforms.

IN KHEM'S WORDS

This is one of the greatest technologies humans have discovered/invented. We want to use it in daily life to connect with the world. Connect with like minded people from the world, share findings, world, etc. we use it to keep learning.

Renewable Energy (Solar, Hydro, Wind, Biogas, Efficiency)

Definition, Local, resilient energy systems prioritized by: lowest environmental impact, maintainability by locals, and reliability for community needs.

Why it matters, Energy shapes everything; moving off fossil fuels improves health, resilience, and economic freedom.

What we do

Energy needs assessment to design microgrids or hybrid systems (solar + storage + backup).

Promote demand side efficiency (LEDs, insulation, passive cooling).

Small hydro and biogas where site appropriate.

Training for local technicians and financing models (cooperatives).

How to apply

Quick energy audit templates.

Standardized rooftop solar packages for homes and community centres.

Biogas digesters for farm waste and community kitchens.

Outputs & metrics

% of community energy from renewables.

kWh per household generated.

Local energy jobs created.

Roles & training

Hunate Energy Technician, Community Energy Manager.

Modules: Energy basics to Solar installation to Maintenance & finance.

IN KHEM'S WORDS

Choice is ours, if we want to use polluting energies or natural healthier energies. Choice is ours to develop how we use energy. We chose to use those energy systems which are less harmful, local and efficient too.

Mechanical Science (Appropriate Automation & Tools)

Definition, Low tech and intermediate mechanical solutions that reduce drudgery and increase productivity, appropriate to local skills and ecology.

Why it matters, Machines free human energy for creativity and care when designed ethically and maintained locally.

What we do

Simple farm machines (manual/solar seeders, threshers, water pumps).

Household aids (door, window, lights, solar cookers, grain mills, improved stoves).

Transport solutions (bicycles, cargo tricycles, e rickshaws).

Maker spaces for repair, modification, and innovation.

How to apply

Starter kits for farmers and households.

Maker space SOPs: create, maintain, document, share blueprints.

Maintenance training + spare parts logistics.

Outputs & metrics

Time saved per household/day.

Machine uptime & mean time to repair.

Local manufacturing & repair jobs.

Roles & training

Mechanic Maker, Tech for Good Engineer.

Modules: Basic mechanics to Repair & fabrication to Safety.

IN KHEM'S WORDS

We use mechanics and technologies to aid humans and nature.
Free repetitive tasks, farming, traveling, etc.

Ethical & Sustainable Business (Trade Science)

Definition, Business designed to regenerate ecosystems, support families, and deliver honest value. Profit is a means; social & ecological health are the measures of success.

Why it matters, Rebuilding local economies reduces exploitation and strengthens community resilience.

What we do

Business design templates for each sector: farming, crafts, tech, hospitality, education, social care.

Ethical sourcing, transparent pricing, and value chain mapping.

Cooperative & family business models.

Market access strategies: ethical branding, direct to consumer, community markets, online platforms.

How to apply

Product development roadmap to small batch pilots to market feedback loop.

Legal & finance starter pack (bookkeeping templates, cooperative bylaws, simple tax guidance).

Incubation support: microgrants, mentorship, peer review panels.

Suggested outputs

Number of viable enterprises launched.

% enterprises profitable after 12 months.

Local income multipliers & social impact indicators.

Roles & training

Business Mentor, Cooperative Facilitator, Impact Auditor.

Modules: Ethical business basics to Product market fit to Bookkeeping & governance.

Example sector: 1. Natural Farming & Food Production

- Permaculture Farming
 - Dry Herbs, Fruits, and Nuts Production
 - Tea & Herbal Drinks (Lemongrass, Hibiscus, Purple Peach, etc.)
 - Oil Production (Cold Press, Essential Oils, Packaging)
 - Beekeeping (Honey, Wax, Bee Products)
 - Cheese, Milk, Yogurt Production
 - Organic Vegetable & Fruit Gardening
 - Egg and Meat Production
 - Mushroom Cultivation
 - Nursery & Plant Sales (Medicinal, Ornamental, etc.)
2. Crafts, Trades & Artisan Work

- ▣ Carpentry & Wood Crafts
- ▣ Ironsmith & Metal Crafts
- ▣ Pottery & Ceramics
- ▣ Bamboo Crafts (Pots, Sculptures, Baskets, Furniture)
- ▣ Soap, Shampoo, Toothpaste, Candle Making
- ▣ Cloth Making, Weaving, Fiber Crafts
- ▣ Cobbler Work, Leather Processing
- ▣ Jewelry Making (Ethical, Handmade)
- ▣ Natural Dyeing & Eco printing

3. Technology & Digital Skills

- ▣ Computer Literacy & IT Training
- ▣ Web Development / Software Creation
- ▣ Data Entry / Data Analysis
- ▣ AI and Automation Tools
- ▣ Digital Art / Animation
- ▣ Social Media Marketing (Filming, Editing, Content Creation)
- ▣ Online Tutoring or Courses

4. Design, Creativity & Education

- ▣ Interior / Fashion / Product / Architectural Design
- ▣ Fashion and Personality Development
- ▣ Music School / Sound Healing
- ▣ Art School (Drawing, Painting, Crafts)

- Dance School
- Yoga & Meditation School
- Educational Content Creation (YouTube, eBooks)
- Astrology & Healing / Life Guidance
- Vastu Consultancy & Eco Home Design
- Skill Training for Youth or Adults

5. Hospitality, Wellness & Experiences

- Ayurveda & Herbal Healing
- Restaurant / Café (Local, Organic)
- Guesthouse / Eco Lodge / Retreat Center
- Camping Sites / Picnic Spots
- Therapy Center & Healing Garden
- Nature Park or Eco Garden
- Tourism Services (Guiding, Storytelling)
- Massage / Wellness Services
- Alcohol Making (Local Traditions, Ethical Production)

6. Community & Social Care

- Orphanage Support Work
- Elderly House / Caregiver Training
- Coaching & Mentorship
- Social Work / Community Organizing
- Local School or Learning Center

□ Sport Ground / Youth Training

□ Animal Rescue / Sanctuary

IN KHEM'S WORDS

The modern business system is not healthy and wise. It is based on profit, possession, greed, and destruction of natural resources, exploitation of human life. We can see this happening. People are ready to lie, cheat, steal, to sell one product for profit. They are ready to destroy nature and the future. They are ready to pollute humans and nature to profit. They are ready to brain wash with mass advertisements. They are ready for anything. In the present system, families break, communities break.

We have a different approach to how business can be done. We design family business, more natural, ethical and moral. We take nature, human health into consideration too. We think of future generations too. We focus on local resources and the local economy. We use technologies to end human slavery.

Law & Ethics (Simple Framework)

Definition, A minimal, universal ethical test and practical legal guidance for actions and projects.

Core rule (simple): Actions that move people, nature, and future toward flourishing are good; actions that push toward degradation or extinction are not.

What we do

Create a simple ethical checklist for projects: environmental impact, human impact, long term resilience, transparency.

Maintain legal primer per country/region (per local counsel) covering business registration, land use, labor rules, NGO compliance.

Establish community governance norms (participatory decision making, open books, rotating leadership).

How to apply

Mandated pre project ethical review & public community briefing.

Require monthly transparency reports for funding and projects.

Outputs & metrics

Instances where community governance corrected a project to be more equitable.

Grievance and resolution logs.

Roles & training

Ethics Officer, Legal Liaison.

Modules: Ethical decision making to Community governance to Local law basics.

IN KHEM'S WORDS

Law, rules and regulations are very confusing in this world right now. Different places, countries, religions, and political ideas have their own set of rules and laws.

We see it simply, any act, choices, made by humans, which pushes us, nature and future towards degradation, extinction is not good. And act, choices, actions that pushes us all, nature, humans towards evolution is a good law and ethics, simple. For now.

Extras, Inspirations & Cross References

Also used knowledge and teachings from the book list we have. Some more derived from bible, Gita, Quran, Buddhism, Taoism, Osho, shud guru, ram dev, nirankari, the Venus project, flower of life, zeitgeist movement, vipassana, open source, block chain technology ideology, and many more projects and documentaries and conspiracies.

What Will Hunateculture Design?

Hunateculture Life Design is about guiding individuals, families, and communities to live in balance with nature, technology, and each other. It combines ancient sciences with modern tools to create a practical, regenerative lifestyle.

We design across multiple dimensions of life:

1. Personal Wellbeing

Vedic astrological analysis & life guidance: understanding body, mind, and life cycles through cosmic influences.

Daily routines & disciplines: personalized timetables, rituals, and practices based on Yoga Sutras to strengthen body, mind, and spirit.

Food & lifestyle choices: healthy diet and kitchen practices guided by Ayurveda for harmony with nature.

Self reflection & growth: challenges and tasks to overcome limitations, heal past wounds, and improve resilience.

2. Homes & Environment

Eco housing: designing natural, modern homes using local and renewable resources.

Vastu Shastra & eco architecture: aligning houses, cities, and farms with natural energy flow.

Permaculture farms: creating self reliant food systems that regenerate land, water, and biodiversity.

Automations: at home, farm and business.

3. Family & Community

Family planning & business design: creating shared goals, dividing roles fairly, ensuring unity, and developing ethical family enterprises.

Community hubs: building open spaces for learning, exchange, and hosting travelers, volunteers, and students.

Education for children: replacing "slave creating" school models with real life learning through family, community, and practical skills.

4. Ethics & Law

Natural law & social responsibility: understanding personal duties toward family, community, and earth.

Leadership & governance: becoming wise enough to choose ethical leaders and reduce dependence on corrupt systems.

Living for future generations: making small sacrifices of false desires implanted by consumer culture and advertisements.

5. Economy & Work

Ethical business modules: family based, sustainable enterprises in farming, crafts, digital skills, wellness, design, hospitality, and social care.

Local economy first: producing, exchanging, and sharing within communities before relying on outside systems.

Reducing dependency: breaking free from banks, monopolies, and profit driven industries.

What Does Life Designed by Hunateculture Look Like?

A Hunateculture lifestyle is rooted in peace, health, and responsibility. It looks like:

Peaceful mornings: yoga, meditation, gratitude, self reflection, and conscious routines.

Self reliant families: producing food, crafts, clothes, furniture, and medicines locally.

Eco homes & communities: clean, safe, natural houses with shared land for humans, animals, and nature.

Balanced living: respecting resources, reducing pollution, avoiding mass consumption and plastics.

Community learning: children and youth learning directly from parents, family businesses, and skill workshops, not only from classrooms.

Ethical economy: family businesses in farming, crafts, wellness, education, and technology that serve needs, not greed.

Health & beauty from nature: herbs, oils, natural cosmetics, and ayurvedic practices replacing chemical industries.

Global connection: hosting travelers, volunteers, and students to share cultures, knowledge, and stories.

Multi generational families: children, adults, and elders living together, guiding and supporting one another.

Independent minds: humans capable of saying no to plastic, factory foods, harmful technologies, false media, and corrupt systems.

How Will It Work?

Step 1: Collecting Data

We begin with deep self reflection and data collection to design a personalized life structure.

Personal Data:

Birth details (date, time, place) for astrological mapping.

Childhood, teen, and adult memories (good, bad, challenges, strengths).

Habits, hobbies, education, jobs, lessons, skills.

Parents' and family influences.

Favorite foods, colors, books, films, etc.

Wishes, sacrifices, dreams for self, family, and future.

Current health, food habits, addictions, strengths, weaknesses.

Love and hate towards self, family, society, world.

This forms the base for astrological, ayurvedic, and vastu analysis and helps design routines, diets, exercises, work types, roles, and disciplines.

Land & Place Data:

Size, location (Google Map), existing soil, air, water, sun, climate.

Available local resources and materials.

Nearby businesses, schools, orphanages, community spaces.

Plants, seeds, skills, traditions, culture of the area.

This helps design eco homes, permaculture farms, and community businesses.

Community & Vision Data:

Local traditions and resources.

Family plans (short-, mid-, and long term).

Community needs and opportunities.

National/global context and future goals.

Step 2: Designing Life & Space

Personalized daily routines based on health and cosmic cycles.

Diet plans, lifestyle practices, and exercises tuned to body and environment.

House and farm designs rooted in Vastu, eco architecture, and permaculture.

Family businesses selected from Hunateculture's business modules.

Community connections with workshops, skill exchanges, and cultural hubs.

Step 3: Training & Implementation

Provide books, resources, and guidance for self reflection and healing.

Connect with similar projects and businesses for practical learning.

Train families to operate their farms, homes, and businesses.

Build community hubs for learning, sharing, and international exchange.

Step 4: Living the Dream

The process ends when individuals and families reach a self-reliant, regenerative lifestyle that matches their dream vision, healthy, ethical, and sustainable.

In short: Hunateculture Life Design is about creating humans, homes, families, and communities that thrive together, rooted in ancient wisdom, supported by modern science, and guided by responsibility for the future.
